

Sweet Thyme Soaps

Sweet Thyme Soaps

Caffeinated Mediterranean Cellulite Spa Massage Bar

Price: \$13.00

get toned

Developed exclusively by SweetThymeSoaps, our all natural, Caffeinated cellulite massage soap is proven to help fight stubborn Cellulite deposits, while maximizing the appearance of healthy smooth skin. Our handmade soap is triple milled in small batches in order to maintain low temperatures. This preserves the natural healing properties of our high grade therapeutic essential oils, which are instantly absorbed through the cell walls, bringing oxygen and health giving elements directly to the cells of the body. Each bar contains 9 therapeutic strength essential oils, French green clay, green tea extract, grapefruit peel, ground loofa and a whopping 800 mgs of pure caffeine anhydrous.

Directions: While showering, massage soap bar into area's affected with cellulite fatty deposits for 30 to 60 seconds. Rinse well.

Skin may tingle and feel warm for about 15 minutes after use.

This means our soap is hard at work.

Please use user's commonsense:

If prolong discomfort or irritation continues, discontinue use immediately.

**FOR EXTERNAL USE ONLY
ON CELLULITE AFFECTED SKIN AREAS**

Not for children, elderly, pregnant women, people with sensitive skin, health problems or allergies to caffeine or essential oils.

What is cellulite?

Cellulite occurs as body tissues in certain areas break down with age. This seems to affect women exclusively and therefore suggests a definite connection to hormonal imbalance. Poor micro-circulation in these areas can damage fatty tissue, causing blood and lymphatic vessel walls to become more permeable. These vessels leak fluid into surrounding tissues, resulting in congestion and swelling of fat lobes under the skin. This prevents nutrients like oxygen from being carried to your skin's tissues, hindering the drainage of toxins. When these toxins cannot be properly eliminated from these areas, scarring and stretch marks occur, trapping fat cells and forming cellulite.

So why does our unique, specially formulated soap help against the fight and reduction of unsightly cellulite deposits? Read on:

Pure Caffeine Anhydrous is clinically proven to decrease the thickness of subcutaneous fatty deposits. The transdermal application of caffeine promotes the sodium export from fat cells, followed by the release of water from surrounding tissues. It has strong natural antioxidant and antidermatitis properties, which help restore the damaging effects of oxidation on the skin, such as aging and elasticity.

Grapefruit E. O is proven to be the only citrus essential oil with unique fat-dissolving properties that target stubborn cellulite fatty deposits. It is capable of removing toxins from the blood while its lymphatic stimulating action makes it highly beneficial in reducing cellulite-cellular congestion.

Rosemary E.O helps stimulate oestrogenic activity, increasing oestrogen levels needed to maintain healthy muscle and skin tone.

Sage E.O is naturally detoxifying helping in the removal of toxins, while increasing lymphatic drainage

Cedar E.O is naturally purifying, causing the release trapped toxins from subcutaneous fat, giving skin a smoother appearance.

Peppermint E.O is naturally stimulating to the upper layer of skin, improving circulation to target areas, for optimal nutrient absorption.

Pine E.O is naturally revitalizing to skin, reducing fluids trapped in allut.

Eucalyptus E.O is naturally toning, helping maintain connective tissue elasticity.

Lemon E.O helps break up and digest molecules of toxic chemicals stored in fat cells while aiding in their removal via the lymphatic system and blood stream.

Dried Grapefruit peel and Ground Loofa both of these natural, gentle exfoliants help stimulate blood flow while sloughing off dead surface cells. This increases nutrients absorption so antioxidants can work more efficiently on targeted area.

Fine-cut green tea and green tea extract are clinically proven as effective treatment in cellulite removal, targeting excess fluids reduction from dimpled fat areas.

Green tea is loaded with antioxidants and vitamins C and E, which help promote vibrant, nourished skin.

French green clay is an ancient old remedy for drawing out skin surface toxins, while tightening surrounding connective tissues.
